

# San-keys T4 Panel - Your Best Companion for Portable Production

With increasing popularity of live streaming software like vMix, more and more users started to ask, what kind of computer configuration will provide the best workhorse for the software, in terms of reliability and cost? Which kind of input/output card best fit with the system? How to reduce the size of desktop computer to build the system?

With years of experience in making control panel for live streaming software, San-keys listened to the voice of customers and developed the T4 San-keys panel, to help customers to solve problems which listed above.

## Choose your favorable brand laptop

It's not necessary to build your own computer for the system, to avoid any incompatible issues, also branded computer price is very reasonable with good enough service for your need. Simply choose the laptop you like with requirements of what the software has issued, then you are all set for production, because, with T4, as it comes with HDMI input, so, you no longer need to look for video interface unit.

## Adding colors to your professional production.

To let producer easier to identify the keys and less boring, San-keys is adding color LED to the panel, so that producer can see exactly what source he/she would like to take

## The PRO way to produce your program

No more working just with your mouse and keyboard, get ready to control through T-bar, which accurately deliver the switching process all under your control!

## The PRO way to produce your program

Control your ptz through T4's joystick\*

## The PRO way to produce your program

Adjust audio level from mic to headsets by turning the knobs on T4

## The PRO way to produce your program

As a program host, you may have to look straight into the camera which is live on air, with T4's wireless Tally, host can simply look into the camera with **RED Tally Lite** and prepare to switch to the next camera with **GREEN Tally Lite** which is the standby camera

\*Will be available soon
